

Adding a new customer

From the day they say yes to the day they go live

Everything you do for a shed company that signs up for the Barnwright 3D designer, in order: the paperwork, the control room, their Dealer Center site at their own .barnwrightsoftware.com address, their owner's setup, the go-live, and adding a lot later. The words in **bold** are the buttons and boxes you will see.

BEFORE YOUR FIRST CUSTOMER · Once.

1 Set up barnwrightsoftware.com

- Add **barnwrightsoftware.com** to the Netlify project for your Barnwright website: **Domain management, Add a domain (Buy a new domain, or Add a domain you already own)**.
- Next to it, tap **Options, Set up Netlify DNS** and follow the steps. After that, each customer's web address takes one step (step 6), and Netlify makes the address and its https lock by itself.

PART 1. THE PAPERWORK · The day they say yes.

2 Fill in their Sign-Up Form

- Open the **Sign-Up Form**. Barnwright Software and sales@barnwrightsoftware.com are already typed in the provider box; add your mailing address, phone and support hours once and keep that copy as your template.
- Fill in **Section B** (how many lots, white-label) and **Section C**: the lots after the first, the lot fees (\$250 each) and the total due now. One lot means nothing is due: leave the payment boxes empty. There is no setup fee and no monthly fee. Save it as **Sign-Up Form - (their business).pdf**.
- Pick their web address with them, for example **cedar-ridge-sheds.barnwrightsoftware.com**, and type it in Section A.

3 Send it with the terms and the questions

- Email them the Sign-Up Form, the **Barnwright Terms and Conditions.pdf** and the **Barnwright Setup Questions.pdf** together.
- They type in Section A (their business and the **owner's email**, which becomes their Dealer Center login), initial Section D, sign with **Fill and Sign** and email it back. You sign it for Barnwright and send them the finished copy.
- They send back the Setup Questions with their logo, their price sheet and photos of their buildings. You need them for Part 4.
- Save the signed form and their answers in a folder for that company.

PART 2. THE CONTROL ROOM · barnwright-control-room.netlify.app**4 Add the customer**

- Sign in to the control room and tap **Add customer**.
- Type the **Business name**, **Contact person**, **Email address** and **Phone** from their Sign-Up Form.
- **Dealership cap** is **1**, their free lot (the control room says dealerships; the Dealer Center says lots). It goes up by itself when they pay for more lots. Put **0** in **One-time build fee (USD)** and **Monthly subscription (USD)**: there is no setup fee and no monthly fee.
- Leave **Application URL** and **Netlify site ID** empty for now (you get them in Part 3). Save.

5 Collect the lot fees (more than one lot only)

- One lot: skip this step. Nothing is due.
- More lots: on the customer, tap **Collect lot fee**, type the lots after the first (each is **\$250**, one time), copy the payment link and email it to them.
- When Stripe confirms the payment, the control room raises their **Dealership cap** by that many lots by itself. You can start building before it is paid; their extra lots open once it is.

PART 3. THEIR DEALER CENTER SITE · On netlify.com, about 15 minutes.**6 Make their site**

- In Netlify: **Add new project**, **Import an existing project**, **GitHub**, then pick **alanyoder-04261992/3d-model-demo-stand-alone-**. Keep the build settings it fills in and tap **Deploy**.
- **Project configuration**, **Change project name**: use their web address name, for example **cedar-ridge-sheds**.
- **Domain management**, **Add a domain**, **Add a domain you already own**: type **cedar-ridge-sheds.barnwrightsoftware.com** and confirm. Their Dealer Center is then **https://cedar-ridge-sheds.barnwrightsoftware.com/dealer**.
- Copy the **Project ID** (also called Site ID) from **Project configuration**, **General**. In the control room, open the customer and paste it in **Netlify site ID**, and put **https://cedar-ridge-sheds.barnwrightsoftware.com** in **Application URL**. Save.

7 Turn on sign-in

- In Netlify: **Project configuration**, **Identity**, tap **Enable Identity**. Leave registration **Open**: anybody can make a login, but only people their owner adds can see anything.

8 Make their activation key

- In the control room, on the customer, tap **Create activation key**. It shows the key **once**, with the customer ID, the control room address and the public key. Keep the page open for the next step.

9 Put the settings on their site

- In Netlify: **Project configuration, Environment variables, Add a variable**. Add each of these:
- **OWNER_EMAIL**: the owner's email from Section A of their Sign-Up Form.
- **CONTROL_ROOM_URL**: <https://barnwright-control-room.netlify.app>
- **CONTROL_ROOM_CUSTOMER_ID**: the customer ID the control room showed.
- **CONTROL_ROOM_PUBLIC_KEY**: the public key, every line of it.
- **CONTROL_ROOM_ACTIVATION_KEY**: the activation key. Tick **Contains secret values** and choose the **Functions** scope only.
- If you want the Dealer Center to email lots about new quotes and send team invites: **RESEND_API_KEY** and **EMAIL_FROM**.
- Then **Deploys, Trigger deploy, Deploy project**, so the settings take effect.

10 Check it

- Open <https://cedar-ridge-sheds.barnwrightsoftware.com/dealer>. The sign-in page shows, black and gold.
- In the control room, the customer's **Software connection** fills in after the owner first opens the Dealer Center. **Run check** confirms it.

PART 4. THEIR OWNER SETS UP · With them on the phone or a screen share, about 30 minutes.

11 Their first sign-in

- Send the owner their link: [https://\(their name\).barnwrightsoftware.com/dealer](https://(their name).barnwrightsoftware.com/dealer). They tap **Make your login** with the owner's email, confirm it from their email, and sign in.
- **Step 1, Your business**: their name, business name, phone and email, and the box **I have read and agree to the Barnwright Software Terms and Conditions**. The Dealer Center records who ticked it and when; it shows in **Settings, Help from Barnwright**.
- **Step 2**: a starting price list. **Step 3**: their first lot.

12 Their prices, look and lots, from their Setup Questions

- **Price list**: turn off the styles they don't sell and type their prices for every size, door, window and option.
- **Settings**: their logo, colors, the line under the price, rent to own, and what the quote form asks.
- **Lots**: add their other lots, up to the lots in their plan. **Team**: add their managers and dealers; each gets a message saying how to sign in.
- If they build differently from the standard (section 6 of their answers), ask Claude to set that up for their business before you open it.

13 Open it to customers

- They open each lot's **3D designer link** and check the buildings and prices. Then **Settings, 3D designer, Open to customers**, and save.
- **Lots**, each lot, **Put the designer on your website**: add their website address, then **Copy website code** and send it to whoever runs their website.
- Send a test quote from a lot's designer link. It shows up in **Customers** as New.

PART 5. GO LIVE · When everything works.**14 Tell them it is live**

- Email them: "Your Barnwright 3D designer is finished and ready to use as of (date). Your customers can design their building at (their web address)."
- Write the go-live date at the bottom of their signed Sign-Up Form.

15 Follow up

- Add a reminder in the control room to call them in two weeks.
- If something isn't working later, ask them to turn on **Help from Barnwright** in Settings, then use **Run check** on their customer in the control room.

LATER. ADDING A LOT · When they open another lot.**16 Collect the lot fee**

- In the control room, open the customer and tap **Collect lot fee**. Type how many new lots (each is **\$250**, one time), then copy the payment link and email it to them.
- When Stripe confirms the payment, the control room raises their **Dealership cap** by that many lots by itself.
- Their Dealer Center picks up the new number within six hours. Their owner then adds the lot under **Lots**.

Changing the terms later: make a new version, email every customer at least 30 days before it takes effect (section 19), and their owner is asked to agree again the next time they open the Dealer Center.
