

Adding a new customer

From the day they say yes to the day they go live

Everything you do for a shed company that buys Barnwright, in order: the paperwork, the control room, their Dealer Center site, their owner's setup, and the go-live. The words in **bold** are the buttons and boxes you will see.

PART 1. THE PAPERWORK · The day they say yes.

1 Fill in their Sign-Up Form

- Open your **Sign-Up Form (blank).pdf** template (Barnwright's details already typed in Section C and the provider box).
- Fill in **Section B** (3D designer, Dealer Center, how many open lots, white-label) and **Section D** (build fee, monthly fee, how they pay) with what you agreed. Save it as **Sign-Up Form - (their business).pdf**.

2 Send it with the terms

- Email them the Sign-Up Form **and** the **Barnwright Terms and Conditions.pdf** together.
- They type in Section A (their business and the **owner's email**, which becomes their Dealer Center login), initial Section E, sign with **Fill and Sign** and email it back. You sign it for Barnwright and send them the finished copy.
- Save the signed form in a folder for that company.

PART 2. THE CONTROL ROOM · barnwright-control-room.netlify.app

3 Add the customer

- Sign in to the control room and tap **Add customer**.
- Type the **Business name**, **Contact person**, **Email address** and **Phone** from their Sign-Up Form.
- **Dealership cap** is the number of open lots from Section B (the control room says dealerships; the Dealer Center says lots). **One-time build fee (USD)** and **Monthly subscription (USD)** are the amounts from Section D.
- Leave **Application URL** and **Netlify site ID** empty for now (you get them in Part 3). Save.

4 Collect the build fee

- On the customer, tap **Collect build fee** and copy the payment link. Email it to them.
- Wait until the control room shows the build fee as paid before you start building. The monthly fee does **not** start yet.

PART 3. THEIR DEALER CENTER SITE · On netlify.com, about 15 minutes.**5 Make their site**

- In Netlify: **Add new project, Import an existing project, GitHub**, then pick **alanyoder-04261992/3d-model-demo-stand-alone-**. Keep the build settings it fills in and tap **Deploy**.
- **Project configuration, Change project name**: use their business, for example **cedar-ridge-sheds**. Their Dealer Center is then <https://cedar-ridge-sheds.netlify.app/dealer> (or connect their own web address under **Domain management**).
- Copy the **Project ID** (also called Site ID) from **Project configuration, General**. In the control room, open the customer and paste it in **Netlify site ID**, and paste their site's address in **Application URL**. Save.

6 Turn on sign-in

- In Netlify: **Project configuration, Identity**, tap **Enable Identity**. Leave registration **Open**: anybody can make a login, but only people their owner adds can see anything.

7 Make their activation key

- In the control room, on the customer, tap **Create activation key**. It shows the key **once**, with the customer ID, the control room address and the public key. Keep the page open for the next step.

8 Put the settings on their site

- In Netlify: **Project configuration, Environment variables, Add a variable**. Add each of these:
- **OWNER_EMAIL**: the owner's email from Section A of their Sign-Up Form.
- **CONTROL_ROOM_URL**: <https://barnwright-control-room.netlify.app>
- **CONTROL_ROOM_CUSTOMER_ID**: the customer ID the control room showed.
- **CONTROL_ROOM_PUBLIC_KEY**: the public key, every line of it.
- **CONTROL_ROOM_ACTIVATION_KEY**: the activation key. Tick **Contains secret values** and choose the **Functions** scope only.
- If you want the Dealer Center to email lots about new quotes and send team invites: **RESEND_API_KEY** and **EMAIL_FROM**.
- Then **Deploys, Trigger deploy, Deploy project**, so the settings take effect.

9 Check it

- Open their site's **/dealer** address. The sign-in page shows, black and gold.
- In the control room, the customer's **Software connection** fills in after the owner first opens the Dealer Center. **Run check** confirms it.

PART 4. THEIR OWNER SETS UP · With them on the phone or a screen share, about 30 minutes.**10 Their first sign-in**

- Send the owner their link: [https://\(their site\)/dealer](https://(their site)/dealer). They tap **Make your login** with the owner's email, confirm it from their email, and sign in.
- **Step 1, Your business:** their name, business name, phone and email, and the box **I have read and agree to the Barnwright Software Terms and Conditions**. The Dealer Center records who ticked it and when; it shows in **Settings, Help from Barnwright**.
- **Step 2:** a starting price list. **Step 3:** their first lot.

11 Their prices, look and lots

- **Price list:** turn off the styles they don't sell and type their prices for every size, door, window and option.
- **Settings:** their logo, colors, the line under the price, rent to own, and what the quote form asks.
- **Lots:** add their other lots, up to the open lots in their plan. **Team:** add their managers and dealers; each gets a message saying how to sign in.

12 Open it to customers

- They open each lot's **3D designer link** and check the buildings and prices. Then **Settings, 3D designer, Open to customers**, and save.
- **Lots**, each lot, **Put the designer on your website:** add their website address, then **Copy website code** and send it to whoever runs their website.
- Send a test quote from a lot's designer link. It shows up in **Customers** as New.

PART 5. GO LIVE · When everything works.**13 Start the monthly fee**

- In the control room, on the customer, tap **Start monthly subscription**, confirm, and copy the payment link.
- Email it to them with their go-live date: "Your Barnwright software is finished and ready to use as of (date). Your monthly fee of \$(amount) starts today. Here is the link to set up the payment."
- Write the go-live date at the bottom of their signed Sign-Up Form.

14 Follow up

- Add a reminder in the control room to call them in two weeks.
- If something isn't working later, ask them to turn on **Help from Barnwright** in Settings, then use **Run check** on their customer in the control room.

Changing the terms later: make a new version, email every customer at least 30 days before it takes effect (section 19), and their owner is asked to agree again the next time they open the Dealer Center.
