Adding a new customer

From saying hello to their first quote, step by step

You need your phone with your Control Room open (**control.barnwrightsoftware.com**) and about an hour at their lot. The words in **bold** are the buttons you tap.

First time? Practice first. On your Control Room's first page, tap **Practice adding a customer**. Everything works the same, but nothing is real: no texts, no emails, no payments.

Addresses you use: your **Sales Inbox** at **inbox.barnwrightsoftware.com** (your private inbox for Barnwright sales messages), and **3D Setup** at **3dsetup.barnwrightsoftware.com** (where you set up a new customer's 3D designer).

BEFORE YOUR FIRST CUSTOMER · Once, about 20 minutes, on a computer.

1 Give your Control Room a Netlify key

- In Netlify: your picture at the top right, **User settings**, **Applications**, **Personal access tokens**, **New access token**. Name it **Control Room**, pick the longest **Expiration** it offers, tap **Generate token** and copy it.
- Open your Control Room's project in Netlify: **Project configuration**, **Environment variables**, **Add a variable**. Key: **NETLIFY_API_TOKEN**. Paste the token as the value, tick **Contains secret values**, and save. Then **Deploys**, **Trigger deploy**.
- Now **Make their Dealer Center** is one button. Without the key, your Control Room shows the steps to do by hand instead. When the key runs out, your Control Room tells you: make a new one the same way.

2 Let Stripe save cards

- In Stripe: **Developers**, **API keys**, then your Control Room's restricted key, and **Edit**.
- Set **Subscriptions** to **Write**. Set **SetupIntents**, **PaymentIntents** and **PaymentMethods** to **Read**. Tap **Save**.
- Now the owner's card is saved when they sign up, and **Start and charge the card** works. If a permission is missing, your Control Room says which one.

3 Give your Control Room a Claude key

- Only **Gather from their website** uses it. Make a Claude key at platform.claude.com and copy it.
- In Netlify, add a variable the same way as the Netlify key: Key **ANTHROPIC_API_KEY**, your Claude key as the value, tick **Contains secret values**, and save. Then **Deploys**, **Trigger deploy**.

4 Connect Claude to your Control Room

- Your Control Room has every step: **Papers**, **Connect Claude**, **Open**. In short:
- At claude.ai or in the Claude desktop app: **Customize**, **Connectors**, **Add custom connector**. Name it **Barnwright Control Room**, address **https://control.barnwrightsoftware.com/mcp**. If it asks, pick **Sign in now** and **Use Claude's published identity**, then **Add**.
- Sign in to your Control Room. Tap **Allow** only if you just tapped Connect in your own Claude app.
- In **Barnwright Control Room**, **Tool permissions**, set **Make the change** to **Needs approval**. Do the same for the tools that send, text or call in **Yoder inbox**, **Multi Mail**, **Resend** and **Twilio**.
- Tap **Download the dealersetup skill** there. At claude.ai: **Customize**, **Skills**, **Upload a skill**.
- Every time Claude asks, tap **Allow** once, never **Always allow**.

PART 1. AT THEIR LOT · About 30 minutes, on your phone.

5 Add them

- In your Control Room, tap **New customer**.
- Type what you know: at least the **Owner's phone** (to text the link) or **Owner's email**. **Business name**, **Owner's name**, **Their website** and **How many lots** help too. Tap **Save**. The owner fills in the rest on the sign-up page.

6 Send the owner the sign-up link

- Tap **Send sign-up link**, then **Text it** (or **Email it**). Your phone's messages open with the link already written. Tap Send. On a computer, **Text it** shows a square code: point your phone's camera at it.
- The owner opens it on their phone, checks their details and their 3D designer web address, and may add their website. They read the short version of the terms, tick **I agree**, type their name and tap **Sign up and save my card**. Stripe's page asks for their card. Nothing is charged that day, except their extra lots. It takes about three minutes.
- Your Control Room fills in everything they typed and shows **Signed** and **Card saved**.

7 A head start from their website

- If they have a website: on the customer, under **Their website**, tap **Gather from their website**. No website there? Tap **Edit customer** and type it in **Their website**.
- Keep the page open while it reads. If it stops, tap **Keep going**. You can start 10 a day. If the owner said no to copying from their website, ask them first.
- Go through **What we found on their website** with the owner and tick **Checked** on each line. Check every price with them: websites are often out of date. Its photos go into your visit photos by themselves.

8 Take the photos

- On the customer, tap **Add photos or files** and pick what you are adding: **Buildings**, **Price list**, **Options and colors** or **Other**. Then **Take Photo** and take as many as you like, or **Choose File** for a PDF price list.
- **Buildings**: each style they sell, the front and the side, and the inside if they show it.
- **Price list**: every page, flat, in good light, close enough that every number is easy to read.
- **Options and colors**: their doors, windows and options with prices, their color cards (siding, trim, roof), and their logo or sign.
- The photos are kept with the customer, and Claude reads them. Tap one to see it big.

PART 2. MAKE THEIR DEALER CENTER · One button, about 3 minutes.

9 Make their Dealer Center

- On the customer, tap **Make their Dealer Center**. Check their 3D designer web address name (for example **cedar-ridge-sheds**) and tap **Make it**. It takes about 3 minutes.
- If it shows **One more step**: tap **Open it in Netlify**, then **Enable Identity**. Then tap **Make their Dealer Center** again: it picks up the same site.
- When their Dealer Center first opens, your Control Room shows **Connected**.

PART 3. THEIR PRICE LIST, WITH CLAUDE · After their Dealer Center shows Connected.

10 Set up their price list with Claude

- At the end of the customer's page, **Set up their price list with Claude** says what to do now. Read its **Now** line.
- In the Claude app, type **/dealersetup** and their business name. Claude reads your visit photos and shows you one plan: each building, size and price, and the photo it came from. Check it against the photos and tell Claude what is wrong.
- It changes nothing until you say go. Then for each batch it asks you to **Allow**: tap **Allow** once, never **Always allow**.
- Until Barnwright's new terms (2.2) are out, Claude can make the plan but can't change their prices. So keep the plan: you and the owner type it into their **Price list** at their computer (Part 4).

PART 4. AT THE OWNER'S COMPUTER · About 30 minutes, with the owner.

11 The owner's login

- On the owner's computer, open **https://(their 3D designer web address)/dealer**, for example https://cedar-ridge-sheds.barnwrightsoftware.com/dealer. **Open their Dealer Center sign-in** on the customer opens it too.
- They tap **Make your login**, type their name, the email from their sign-up and a password, and tap **Make my login**. Then they open the email that comes and tap the link in it.
- Tick **Keep me signed in on this device for 30 days** only on the owner's own computer and phone. Leave it off on a computer other people use.
- They sign in. First setup: their business, a tick in **I have read and agree to the Barnwright Terms and Conditions**, then **Every standard building** or **Start small**, then their first lot and **Finish setup**.

12 Keep it on their computer and their phone

- **Computer** (Chrome or Edge): click the **Install** button at the right end of the address bar, then **Install**. The Dealer Center gets its own icon on their desktop.
- No Install button? Bookmark the page, or in Chrome use the menu, **Cast, save and share**, **Create shortcut**.
- **Phone**: open the same address, tap **Share**, then **Add to Home Screen**. Open it from the Home Screen and sign in there too, with the same tick: it keeps its own sign-in.

13 Their prices and options, from your photos

- **Price list**: type in Claude's plan with the owner. Turn off the styles they don't sell and type their price for each size, door, window and option, using your **Price list** and **Options and colors** photos.
- **Doors & windows**: the 8×12 and 10×12 Side Utility, Dormer Shed and Side Lofted Barn come with the 48 in Wooden Door, so it needs a price ($0 is fine). The Dealer Center says so before **Save**.
- Ten standard styles are already built with your shop numbers. A style they build differently, like a steeper roof or taller walls: **Buildings**, tap the style, change its numbers under **How it's built**, then tap **Check every size**.
- **Settings**: their logo, their colors and the line under the price.

14 Their other lots and their team

- **Lots**, **Add a lot**: one for each of their other lots. They can open as many as they have paid for.
- **Team**, **Add a person**: their managers and dealers. Each one gets a message saying how to make their login.

15 Show them Barnwright, in Settings

- **Settings**, **Barnwright** says Barnwright's new terms (2.2) aren't out yet, so Barnwright can only run checks for now.
- When you need to check something for them, the owner types it in **What should Barnwright do?**, picks **For how long** (1 to 24 hours) and taps **Turn on**. It turns itself off when the time is up, or with **Turn off now**.

16 Open it to customers

- **Lots**, each lot, **Look at the preview**: check the buildings and prices with the owner.
- Then **Settings**, **3D designer**, **Open to customers**, **Save settings**.
- **Lots**, each lot, **Put the designer on your website**, **Copy website code**: send it to whoever runs their website.
- Send a test quote from a lot's 3D designer link. It shows up in **Customers** as New.
- Give the owner the **Welcome Sheet** (on your Papers page). It has all of this for them.

PART 5. START · When everything works.

17 Start the monthly fee

- In your Control Room, on the customer, tap **Start monthly fee**. Check the amount and the card, then tap **Start and charge the card**. Their card is charged that day and on the same day every month after.
- No card saved? Then **Start monthly fee** gives you a payment link instead: **Text it** or **Email it**.
- Card declined? Tap **Send card link** and text it: they save a different card on their page. Then tap **Start and charge the card** again.
- Add a reminder to call them in two weeks.

LATER

18 When they open another lot

- On the customer, tap **Get extra lot payment link**, choose how many new lots, then **Text it** or **Email it**.
- When they have paid, their Dealer Center lets them add the lot within a few hours: **Lots**, **Add a lot**.

Changing the terms later: make a new version, tell every customer at least 30 days before it starts (terms section 19), and each owner is asked to agree again the next time they open their Dealer Center.
